DEV2700 : Application Architecture

The Application Architecture course concentrates on development architecture and industry best practices. Students will apply programming fundamentals using modern development models that encourage modular design and highly maintainable code. Emphasis is placed on application extendability and scalability utilizing proper data and software architecture.
Credits 4
Course Length 4 weeks
Please note: This course must be successfully completed within 2-attempts. Students unable to successfully complete the course within 2-attempts will be dismissed from the program.
