

# ITE239 : Project and Portfolio III: Information Technology

The Project and Portfolio III: Information Technology course combines hands-on learning experiences with summative and formative portfolio assessments. In this course, students will extend their existing project by applying their knowledge of enterprise authentication, network security, and risk assessment to create a project of multiple integrated servers that have been secured. Upon completion of this course, students will have demonstrated the design, installation, configuration, and validation of a properly secured system using shared authentication and network security rules. They will also complete a written project plan documenting the system and design decisions that were made based on research of risk-management and security best practices.
