

CGA4014 : Character Animation

The Character Animation course focuses on strengthening students' animation skills by exploring methods for creating movement that is entertaining, appealing, and clearly driven by the characters' emotions and personality. Students will also analyze methods for creating solid acting choices that are unique and interesting. Through discussion and analysis, students will be introduced to the importance of evaluating their own work as well as the work of their peers. This will enable them to critique each others projects with the intent of implementing what they have learned into their own animation, preparing them for situations encountered in the real world.
